

# Phishing Awareness Guide

Phishing is a cyber attack where attackers impersonate trusted organizations to steal sensitive information such as passwords, OTPs, bank details, or personal data.

## **Common signs of phishing:**

- Urgent requests to act immediately.
- Suspicious links or attachments.
- Unknown sender addresses.
- Spelling or grammar mistakes.
- Requests for passwords, OTPs, or payment.

## **Common types:**

Email phishing, SMS phishing (smishing), voice phishing (vishing), fake login pages, QR code scams, and social media scams.

## **How to stay safe:**

- Verify the sender before responding.
- Hover over links before clicking.
- Never share OTPs or passwords.
- Enable multi-factor authentication.
- Keep software updated.

## **Example:**

Message: 'Your bank account will be blocked today. Click here immediately to verify your account.'  
This is suspicious because it creates urgency and asks the user to visit an unknown link.

## **If you suspect phishing:**

Do not click links or download attachments. Report the message to the relevant organization and delete it.
